Profile

I am a third-year Computer Engineering student at Cukurova University with a strong interest in Artificial Intelligence, Computer Vision, and Machine Learning. I focus on CNNs, image processing, robotics, ROS, and robot task and motion planning. I am an analytical and solution-oriented thinker, aiming to pursue an academic career through research and innovation in AI and robotics.

Education

09/2023 – Present **Computer Engineering**
Cukurova University
GPA : 3.31

Languages

English
B2

German
A2

Turkish
Native

Skills

Python	● ● ● ● ●	C++	● ● ● ● ●
Computer Vision OpenCV (Python/C++), Object Detection (YOLO), Image Processing	● ● ● ● ●	Deep Learning CNN Architectures, TensorFlow, Keras, PyTorch, Neural Networks	● ● ● ● ●
Machine Learning Scikit-learn, Pandas, Numpy	● ● ● ● ●	Embedded Systems ROS, Arduino, Raspberry Pi, Pixhawk	● ● ● ● ●

Professional Experience

08/2026 – Present **TÜBİTAK STAR Research Intern**
Çukurova University
Developed robot arm simulations and motion planning using ROS and MoveIt, contributing to visual SLAM and computer vision for robotic task execution.

Organisations

12/2025 – Present **IEEE Student Branch Çukurova**
RAS Board Member
Supported robotics research, technical training, and committee projects.

05/2025 – 07/2026 **Huawei Student Developers Cukurova (HSD CUKUROVA)**
Project Leader
Coordinated team operations while developing leadership and communication skills.

05/2025 – 07/2026	AnkaNova UAV Team <i>Team Leader</i> Led the TEKNOFEST Combat UAV team and managed autonomous system development.
02/2025 – 05/2025	Çukurova Üniversitesi Savunma ve Yüksek Teknolojiler Kulübü (SAYTEK) <i>Software Team Leader</i> Led software development for UAV and UUV projects, focusing on Computer Vision, ML, and ROS.
04/2018 – 05/2019	Cymurghs Robotic Team <i>Software Team Member</i> Developed Python, Computer Vision, and robotics solutions for FRC competitions.

Projects

08/2026 – Present	LLM-Supported Visual SLAM for Robot Task and Motion Planning <i>Robotics & Motion Planning Researcher</i> Developed robot arm simulations and motion planning using ROS and MoveIt, contributing to visual SLAM and computer vision for robotic task execution.
11/2025 – Present	SoilMate <i>AI Architecture</i> Designed and optimized deep learning models using MindSpore.
06/2025 – Present	Computer Vision Based Robotic Arm Developed a Raspberry Pi–Arduino robotic arm with CNN-based object detection.
06/2025 – 07/2026	Combat UAV Led R&D and technical development for the TEKNOFEST Combat UAV project.
11/2025 – 11/2025	Real Time Face Tracking System Developed real-time face tracking using YOLO, Python, and Arduino.
02/2025 – 05/2025	Autonomous Underwater Vehicle (AUV) Developed autonomous systems integrating ROS, Computer Vision, and Machine Learning.

Awards

02/2026	Winner - Huawei Developer Competition Europe 2025 <i>Huawei</i>
